Valmistaja: OKW

C2320719

Quick fix cable gland, M20 Rational installation from the outside, even in inaccessible places, without special tools: simply push the cable gland into the drilled hole and centre it. The screw connection can be tightened from the outside by means of a locknut that has a left-hand thread. Then feed in the cable and fix it as usual. The cable gland only extends into the enclosure for a few millimetres and so does not hinder any other component inside. It is fitted as standard with a strain relief and seal for protection class IP 68. It is suitable for wall thicknesses of 1 to 4 mm with a through hole in accordance with DIN 50262. Clamp ranges: diameter 8 - 13 mm.

Supply 1 cable gland
