HYPERFLEX 13 /.500"

[12,7 mm / 0,500 inches Cable]

WHY CHOOSE THIS CABLE:

- **The best cable of our range**, a further evolution of our **ULTRAFLEX 13 /.500"** (the wires in the conductor are no longer 19, but even 37.) This improvement leads the cable to better attenuations values and greater flexibility, **perfectly matching with rotator operated antennas**.
- **Outstanding attenuations up to 10.000 MHz**. Notwithstanding its size is only 12,7 mm (effective 0,50"), rival with larger models of 15 mm, **reducing the number of connectors needed from 4 to 2**, because no further flexible cable is needed for the final connection to the antenna.
- **Reduced weight** compared to bulkier, heavier and more expensive competitors: this leads to a **reduced stress of the cable** in the "hanging and swinging" stretch in rotors. A must for ambitious installations.
