ULTRAFLEX 10 /.400"

[10,3 mm / 0,405 inches Cable]

WHY CHOOSE THIS CABLE:

- **Extraordinary flexibility:** perfect matching with rotator operated antennas, obtained by means of a sophisticated full copper stranded inner conductor (made of 7 wires).
- This cable has the same dimensions of **RG 213/U** but it's much more flexible and performant. Differently from this one, provided that you use our connectors, somebody reported that they managed to lower the background noise **by two squelch stops**.
- **Screening efficiency at the highest level** >105 dB (SA), this leads to a dramatic **reduction of the background noise**. Moreover the braiders used are 24 spools, instead of 16 spools, **giving 50% more crossovers**.
- If you transmit above 4 Ghz, recommend our model **HYPERFLEX 10 /.400"**, a stranded core cable with the most impressive performances on the international market.
